

CLAIMS

What I claim as my invention is: A portable suction device comprised of:

1. A steerable wheeled metal frame.
2. A collection box with perforated metal separator and liquid return shoot.
3. A gasoline powered motor.
4. A high pressure discharge pump drawing liquid from pond or pool.
5. A venturi system powered by high-pressure side of pump.
6. A variable length suction hose attached to venturi.
7. An adjustable pole attached to end of suction hose for operator manipulation.
8. A discharge hose attached to venturi, which enters collection box above perforated metal separator.
9. A rotating frame assembly attached to venturi to position venturi and hoses in or out of liquid for use or storage.
